This CDS clone is a part of a collection of human full length expression clones generated by BD Biosciences Clontech and the Harvard Institute of Proteomics. Each CDS has been cloned in two forms: with and without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion(TM) cloning system between the Sall and HindIII sites of the pDNR-DUAL vector. Additional sequences in the clone: 'ACC' after Sall site and before 'ATG' to provide Kozak consensus sequence; 'GG' after last codon and before HindIII site to maintain reading frame.
Clone distribution: http://bioinfo.clontech.com/orfclones.

RESULT 14 AL356361 AL356361 AL356361 AL356361 AL356361 DEFINITION Human DNA sequence from clone RP11-35L17 on chromosome 1, complete sequence. ACCESSION AL356361 VERSION KEYWORDS SOURCE ORGANISM HTG. SOURCE ORGANISM Homo sapiens (human) ORGANISM Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo. 1 (bases 1 to 127832) Lloyd,C. TITLE JOURNAL Cambridgeshire, CB10 1SA, UK. B-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk On Jun 21, 2002 this sequence version replaced gi:18693024. Unity sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the	Db 1341 GTGTGGCACCAGACGTCTTTGCAAAACATGAAGGTCAGAGAGGACACACAC

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr1

RP11-35L17 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm

Database SwissProt_42:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FUNCTION: This enzyme condenses acetyl-CoA with acetoacetyl-CoA form HMG-CoA, which is the substrate for HMG-CoA reductase. CATALYTIC ACTIVITY: Acetyl-CoA + H(2)O + acetoacetyl-CoA = (S)-3 hydroxy-3-methylglutaryl-CoA + CoA. PATHWAY: PRODUCTION OF MEVALONATE FROM HMG-COA PRIOR TO THE SYNTHESIS OF STEROLS SUCH AS CHOLESTEROL AND ISOPRENOIDS. SUBCELLULAR LOCATION: Cytoplasmic. SIMILARITY: Belongs to the HMG-CoA synthase family.

CC -!- FUNCTION: This enzyme condenses acetyl-COA with acetoacetyl-COA to

form HMG-COA, which is the substrate for HMG-COA reductase.

CC -!- FUNCTION: This enzyme condenses acetyl-COA acetoacetyl-COA = (S)-3-

hydroxy-3-methylglutaryl-COA + (COA) + ACETOACETYL-COA = (S)-3-

hydroxy-3-methylglutaryl-COA + COA.

CC -!- FUNCTION: CACTIVITY: ACETYL-COA + H(2)O + acetoacetyl-COA = (S)-3-

hydroxy-3-methylglutaryl-COA + COA.

CC -!- FUNCTION: Cytoplasmic.

CC -!- SIMILARITY: Belongs to the HMG-COA PRIOR TO THE

CC -!- SIMILARITY: Belongs to the HMG-COA synthase family.

CC -!- SIMILARITY: Belongs to the HMG-COA synthase family.

CC -!- SIMILARITY: Belongs to the HMG-COA synthase family.

CC -!- SIMILARITY: Belongs to the HMG-COA synthase family.

CC -!- SIMILARITY: Belongs to the HMG-COA synthase family.

vertebrate evolution.";
Genomics 23:552-559(1994).
-!- FUNCTION: This enzyme condenses acetyl-CoA with acetoacetyl-CoA to form HMG-CoA, which is the substrate for HMG-CoA reductase.
-!- CATALYTIC ACTIVITY: Acetyl-CoA + H(2)O + acetoacetyl-CoA = (S)-3-hydroxy-3-methylglutaryl-CoA + CoA.
-!- PATHWAY: RESPONSIBLE, TOGETHER WITH HMG-COA LYASE FOR KETONE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-OCT-1996 (Rel. 34, Created)

Natl. Acad. Sci. U.S.A. 87:3874-3878(1990). FUNCTION: This enzyme condenses acetyl-CoA with acetoacetyl-CoA form HMG-CoA, which is the substrate for HMG-CoA reductase. CATALYTIC ACTIVITY: Acetyl-CoA + H(2)O + acetoacetyl-CoA hydroxy-3-methylglutaryl-CoA + CoA.
PATHWAY: RESPONSIBLE, TOGETHER WITH HMG-COA LYASE FOR KETONE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               L; M33648; AAA41336.1; -.

SUBCELLULAR LOCATION: Mitochondrial.
TISSUE SPECIFICITY: Liver and kidney.
SIMILARITY: Belongs to the HMG-CoA synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NSLCMTVVQNLMERNNLSYDCIGRLEVGTETIIDKSKSVKTNLMQLFEESGNTDIEGIDT

Biochem. 217:691-699(1993).

FUNCTION: This enzyme condenses acetyl-CoA with acetoacetyl-CoA form HMG-CoA, which is the substrate for HMG-CoA reductase (By similarity).

CATALYTIC ACTIVITY: Acetyl-CoA + H(2)O + acetoacetyl-CoA = (S)-3 hydroxy-3-methylglutaryl-CoA + CoA.

PATHWAY: PRODUCTION OF MEVALONATE FROM HMG-COA PRIOR TO THE SYNTHESIS OF STEROLS AND ISOPRENOIDS SUCH AS JUVENILE HORMONES.

SIMILARITY: Belongs to the HMG-CoA synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           53.9%;

runction: This enzyme condenses acetyl-CoA with acetoacetyl-CoA form HMG-CoA, which is the substrate for HMG-CoA reductase (By similarity).

CATALYTIC ACTIVITY: Acetyl-CoA + H(2)O + acetoacetyl-CoA = (S)-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              183
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  153

(3-hydroxy-3-methylglutaryl coenzyme A synthase)
HCS OR SPAC4F8.14C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             hydroxy-3-methylglutaryl-CoA + CoA.
PATHWAY: Production of mevalonate from HMG-CoA prio
synthesis of sterols and isoprenoids.
SIMILARITY: Belongs to the HMG-CoA synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               106
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 134
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   224

CATALYTIC ACTIVITY: Acetyl-CoA + H(2)O + acetoacetyl-CoA = CATALYTIC ACTIVITY: Acetyl-CoA + CoA.

hydroxy-3-methylglutaryl-CoA + CoA.

pathway: Production of mevalonate from HMG-CoA prior to the pathway: Production of mevalonate from HMG-CoA prior to the synthesis of sterols and isoprenoids.

SIMILARITY: Belongs to the HMG-CoA synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     T., Matsuda
